EXECUTIVE SUMMARY

Attached is the sixth biennial Report to the Legislature on Wetland Mitigation Banks as required under Section 1851 of the California Fish and Game Code. Direct links to all Fish and Game Code sections related to Wetland Mitigation Banks (including Section 1851) are available at http://www.dfg.ca.gov/habcon/conplan/mitbank/cmb_genpolicies.html. Copies of previous Legislative reports are available at http://www.dfg.ca.gov/habcon/conplan/mitbank/cmb_pubs.html.

Fish and Game Code Section 1851 requires that the following information be reported for each wetland mitigation bank (“mitigation bank”):

- Bank creator contact information
- Bank operator contact information
- Bank creation date
- Bank's service area description
- Pre-bank habitat functions on site
- Types of financial assurances
- Bank goals
- Wetland acres and habitat functions created
- Credits issued
- Biological productivity of created wetlands
- Wetland acres and habitat functions lost as result of permitted projects

This Report provides an overview of wetland banking in California and the status of California's wetland mitigation banks. It contains cumulative information, as well as information on two new mitigation banks established during the period July 2009 to November 2011 (Table 1), bringing the total number of California wetland mitigation banks to 25. Topics include background information describing wetland mitigation and mitigation banking, descriptive and explanatory information about the wetland mitigation bank information contained in the report, and methods for compiling, managing, and

distributing that information. A list of the mitigation banks included in the report is provided in Table 4, and status information about each mitigation bank is provided in Appendix A.

In addition to the 25 wetland mitigation banks, the State of California collaborates with federal agencies in conservation banking, a compensatory mitigation program similar to wetland mitigation banking that addresses the mitigation requirements for projects impacting upland habitats or that may result in the take of threatened or endangered species. Conservation banks are not discussed in detail in this Legislative Report, as this statutory reporting requirement is specific to wetland mitigation banks; however, the California Department of Fish and Game (CDFG) is also signatory to 32 conservation banks. In the last edition of this Report, several conservation banks with seasonal wetlands were included in a separate appendix, Appendix B; and all non-wetland conservation banks were listed in Appendix C. In this edition, all conservation banks were combined and are now included in Appendix B. Two new conservation banks were also established during this time period and several banks were proposed or amended. A complete list of all banks that CDFG is signatory to is available online at: <http://www.dfg.ca.gov/habcon/conplan/mitbank/catalogue/catalogue.html>.

Information on mitigation and conservation banks in California to which CDFG is not signatory may be found on the U.S. Army Corps of Engineer's (USACE) Regulatory In-lieu fee and Bank Information Tracking System (RIBITS) at: <http://geo.usace.army.mil/ribits/index.html>. Information describing many of the mitigation banks in California has been uploaded onto RIBITS since the January 2010 edition of this Report. Decision documents, including agreements, exhibits, maps, and management plans are available to the public via RIBITS and credit sales may be updated and transactions may be recorded in real time. In addition, the USFWS has partnered with the USACE to begin adding federally-approved conservation banks to the registry. CDFG staff is continuing to work with our federal partners to incorporate information on state-approved banks as staffing allows. CDFG is hopeful that all banks in California will be included in the RIBITS registry by the 2014 edition of this Report.

Table 1. New Mitigation Banks on Record Since the 2010 Biennial Legislative Report

Name of Bank (Appendix page #)	County where bank is located	Date the bank was created	Overall acreage of the bank	Wetland acreage established at the bank	# wetland credits
Cosumnes Floodplain Mitigation Bank	Sacramento	10/6/2009	493	471.71	458.74 acres & 56541 linear feet
Sacramento River Ranch Mitigation Bank	Yolo	8/25/10	113.39	110.0	110.0

The following are general statistics of banks within CDFG’s mitigation and conservation banking program. Similar statistics included at the conclusion of this Legislative Report pertain to wetland mitigation banks only.

- CDFG is signatory to 41¹ active mitigation and/or conservation banks.
- CDFG is signatory to 16 banks that have sold out their established credits.
- CDFG holds fee title to 16 banks.
- CDFG is the grantee of conservation easements on 27 banks.
- The smallest bank in acreage is 11.96 acres, while the largest is 6059 acres.
- Credits have been established for 34 species and 27 habitat types over the 18 years of banking in California (Table 2).

¹ One of these banks is “established,” but has not met the requirements for credit release pursuant to its agreement and is not selling credits at this time.

Table 2. Credits Established for the Following Species and Habitats

Credited Species	Credited Habitats
Alameda Whipsnake	Alluvial Fan Sage Scrub
Blunt-Nosed Leopard Lizard	Chaparral
Burke's Goldfields	Coast Live Oak Woodland
Butte County Meadowfoam	Coastal Sage Scrub
California Orange Throated Whiptail	Emergent Marsh
California Red-legged Frog	Floodplain Mosaic Wetlands
California Tiger Salamander	Floodplain Riparian
Coastal California Gnatcatcher	Freshwater Marsh
Delta Smelt	Inland Sage Scrub
Giant Garter Snake	Jurisdictional Riparian
Giant Kangaroo Rat	Native Grassland
Hoover's Eriastrum	Non-native Grassland
Kern Mallow	Non-tidal Wetlands
Orange Throated Whiptail	Oak Riparian Woodland
Recurved Larkspur	Riparian Forest
Salmonids ²	Riversidian Sage Scrub
San Diego Thorn Mint	Shaded Riverine Aquatic
San Joaquin Antelope Squirrel	Southern Maritime Chaparral
San Joaquin Kit Fox	Swainson's Hawk Foraging Habitat
San Joaquin Le Conte's Thrasher	Upland Habitat
San Joaquin Woolly Threads	Valley Oak Woodland
Sebastopol Meadowfoam	Vernal Pool
Short-Nosed Kangaroo Rat	Vernal Swale
Slough Thistle	Western Burrowing Owl Foraging Habitat
Sonoma Sunshine	Wetlands
Southern Pond Turtle	Woody Riparian
Swainson's Hawk	
Threatened and Endangered Species	
Tipton Kangaroo Rat	
Vernal Pool Fairy Shrimp	
Vernal Pool Tadpole Shrimp	
Valley Elderberry Longhorn Beetle	
Western Burrowing Owl	
Western Pond Turtle	

² Credits allocated for "Salmonids" in general, but may be applied to specific salmonid species or salmon runs.

I. BACKGROUND ON WETLAND MITIGATION BANKING

Under existing state and federal statutes, any individual, firm, or public agency that undertakes activities that destroy, degrade, or adversely alter the environment may be required to compensate the public for impacts to natural resources. For example, compensatory mitigation is required under the California Environmental Quality Act if a proposed project will "substantially diminish habitat for fish, wildlife or plants." Mitigation is also required as a condition to "take" (kill, capture, etc.) a species under the California Endangered Species Act.

Similarly, federal statutes, such as the Clean Water Act, require mitigation for activities that alter or harm existing wetlands. To offset wetland impacts, a project proponent may be required to permanently set aside and/or restore a specified amount of wetland acreage or resources, or may be allowed to purchase credits at a wetland mitigation bank. Alternatively, a habitat conservation plan that is designed to protect and recover threatened or endangered species under the federal Endangered Species Act, may require that a landowner "minimize or mitigate" for activities that are damaging to the species.

Conventional Mitigation

Despite its purpose to offset environmental impacts, mandated mitigation for single-projects is often insufficient to offset the full impacts of development on biological resources. When mitigation is required at the development (project-specific) level, piecemeal patches of ineffective conservation lands are often the result. Applying mitigation in this piecemeal fashion does not address the broader conservation objectives that federal, state, and local agencies have for the region within which the development is proposed to occur.

Typical conventional mitigation is perhaps best illustrated by the following example. A property owner who seeks to develop or alter his or her property may take the steps necessary to satisfy mitigation requirements by protecting a portion of the property to be developed. On a parcel of ten acres, for example, two or three acres may be set aside as a "reserve" in order to mitigate for the proposed development. Such a set-aside reserve may not substantially advance regional environmental objectives nor provide for the long-term viability, connectivity, and functional value of the resources

(species and habitats) impacted. In short, the set-aside reserve may lose some or all of its biological value because of its small size and isolation from other protected areas.

In addition, the process of designing, implementing, managing and monitoring each new mitigation set-aside reserve for each development project can be time consuming and costly for the project proponent and regulatory agencies. In contrast, larger and connected tracts of open space may be managed and monitored as one large reserve; providing project proponents and regulators with more affordable and effective options for management long term.

Wetland Mitigation Banking

Since the mid-1980s, the State of California and others have actively sought to prevent the inadequate, small, fragmented habitat reserves that often resulted from project-by-project mitigation. One approach to remedy the inadequacy of single-project mitigation has been the development of mitigation banks. Wetland mitigation banks are generally large or connected areas of preserved, restored, enhanced, or constructed wetlands set aside for the express purpose of providing mitigation for project impacts to wetland habitats. A bank is authorized to sell credits which represent the habitat values created on the bank. Credits are sold to project proponents who need to provide compensation for unavoidable loss of wetlands due to development where avoidance or on-site mitigation is not feasible or desirable.

Mitigation banks may be used to consolidate single-project mitigation lands into large and ecologically meaningful reserves. Banks can also be designed to maximize the resulting biological and functional value of a site by restoring otherwise degraded habitat. For those parties needing to mitigate for project impacts, mitigation banks serve to streamline the regulatory process by providing a pre-established (i.e., in advance) mitigation site which the regulating state and federal agencies have already confirmed will provide adequate and appropriate mitigation for certain wetland habitats or species (as specified in the bank agreement). By mitigating at a bank, the project proponent can avoid the time and cost of searching for a suitable mitigation site and having to protect it themselves in perpetuity.

In summary, mitigation banks have several advantages over project-by-project

mitigation sites, including:

- Advance Mitigation or Mitigation Before Impact:
Wetland habitat can be created prior to project impacts in order to reduce or eliminate temporal loss of habitat values and function.
- Large Reserve Size:
The wetland mitigation from many small isolated impacts can be consolidated into larger areas of permanently protected habitat in order to contribute to larger intact ecosystems, which are likely to withstand environmental changes, including climate change, better than smaller isolated areas.
- Improved Resources and Expertise:
Wetland banks can consolidate financial resources, planning, and biological expertise in order to improve the chance of successful establishment and long-term management of compensatory habitats.

In recent years, the State of California has sought to consolidate mitigation requirements for wetland impacts under the State Fish and Game Code and the Federal Clean Water Act. In 1993, the Sacramento-San Joaquin Valley Wetland Mitigation Bank Act³ was passed into law. This statute describes the need for wetland mitigation banking and identifies general provisions for CDFG's participation in such a program. The California Wetlands Conservation Policy⁴ was established that same year and identifies wetland mitigation banking as a tool that may be used as part of statewide and regional strategies to conserve wetlands. In April 1995, the California Resources Agency and the California Environmental Protection Agency issued their joint Official Policy on Conservation Banks⁵ (including mitigation banks). This policy expanded the rationale for establishing banks to include non-wetland mitigation, and provided direction on establishment and operation of banks statewide.

³ Fish and Game Code 2011: California Edition. Chapter 7.8. §1775.

⁴ Wilson, Pete. Executive Order W-59-93. California Wetlands Conservation Policy. August 23, 1993.

⁵ Resources Agency/California Environmental Projection Agency, Official Policy on Conservation Banks, April 7, 1995.

In November 1995, five federal agencies, including U.S. Army Corps of Engineers (USACE), U.S. Environmental Protection Agency (USEPA), Department of Agriculture's Natural Resources Conservation Service (NRCS), U.S. Fish and Wildlife Service (USFWS), and the National Oceanic and Atmospheric Administration (NOAA), also issued a formal policy on the establishment, use, and operation of mitigation banks⁶. The federal guidance was provided to assist the regulatory and banking community in meeting the requirements of Section 404 of the Clean Water Act, Section 10 of the Rivers and Harbors Act, the wetland conservation provisions of the Food Security Act (FS) (i.e., "Swampbuster"), and other applicable federal statutes and regulations when undertaking wetland banking. The guidance was intended to clarify the applicability of existing federal requirements to wetland mitigation banking. It also designated USACE (or NRCS) as the lead federal agency in the wetland bank establishment process.

USEPA and USACE further developed their guidance on Compensatory Wetland Mitigation in 2003, which was finalized and updated in the federal register in 2008⁷. This 2008 "federal rule" established mitigation banking as the preferred method through which to provide compensatory mitigation for wetland impacts. According to federal agencies, wetland mitigation banking should take precedence over both In-Lieu Fee programs and single party "set-aside" (a.k.a. permittee responsible) mitigation sites. Under the federal mitigation bank establishment process, an Interagency Review Team (IRT), formerly known as Mitigation Bank Review Team (MBRT), is formed, consisting of representatives of the agencies which have jurisdiction over, or an interest in, wetlands. The California Department of Fish and Game (CDFG) is a participant on several IRTs throughout the state, which develop and approve the terms of each bank agreement. IRTs strive to obtain consensus in developing the terms of the bank agreement, and on any actions they take with regard to wetland bank establishment, site inspection/monitoring, credit release, management funding, and other aspects of wetland bank operations.

II. DESCRIPTION OF WETLAND MITIGATION BANKING REPORT INFORMATION

Statutory Reporting Requirements

Fish and Game Code Section 1851 requires that the following information be reported for each existing wetland mitigation bank that was in operation as of January 1, 2001, and that sells credits to the public in California:

- Bank creator contact information: "The name, address, and telephone number of the person or agency who created the wetland mitigation bank site."
- Bank operator contact information: "The name, address, and telephone number of the wetland mitigation bank operator and the address or other appropriate physical description of the location of the wetland mitigation bank site."
- Bank creation date: "The date the wetland mitigation bank site was created."
- Bank's service area: "A description of the wetland mitigation bank site's service area."
- Pre-bank habitat functions on site: "A description of existing habitat functions at the wetland mitigation bank site prior to its development as a wetland mitigation bank site."
- Types of financial assurances: "The type of financial assurances secured by the wetland mitigation bank operator to ensure management of the wetland mitigation bank site in perpetuity."
- Bank goals: "Whether goals were established for the wetland mitigation bank site, and what percentage of those goals has been achieved."
- Wetland acres and habitat functions established: "Utilizing existing information compiled by the United States Army Corps of Engineers or other federal agencies, the number of wetland acres and habitat functions created at the bank site."
- Credits issued: "The number of credits issued and to whom."
- Biological productivity of created wetlands: "An assessment of the

biological productivity of the created wetlands."

- Wetland acres and habitat functions lost as result of permitted projects:
"Utilizing existing information that is publicly available within the records of state or federal agencies, a comparison of the wetland acreage and habitat functions that were created at the bank site and those that were lost as a result of the permitted projects for which credits were obtained."

Several of the wetland mitigation banks in California summarized in this Report were established prior to enactment of Section 1851, and have annual reporting requirements that differ from the statutory requirements listed above. CDFG has acquired as much of the information as is currently available, but some of the information requested under Section 1851 may be missing. Furthermore, Section 1851 does not define or provide guidance on how to report some of the specified items. To clarify what information is reported here, each of the reporting requirements is discussed in the next section.

Description of the Reporting Requirements and Information Included in this Report

Appendix A provides a brief overview of the 25 existing wetland mitigation banks. The information for each bank is organized in four general sections:

Contact Information: bank owner and bank operator name and contact information.

Bank Information: bank creation date, total bank acreage, total wetland credits established, total wetland credits sold, and total wetland credits remaining for sale, general location of the bank, service area description, counties within the service area, financial assurance types, and signatory agencies.

Biological Information: bank site goals, percentage of goals achieved, wetland habitat functions before bank creation, wetland habitat functions created at the bank site, total wetland acres established, and overall wetland habitat success.

Operational Information: wetland functions lost to impacts, wetland acres lost to impacts, number of credits sold and to whom.

The direct statutory reference, a brief description, and all necessary additional information pertaining to each reporting requirement are listed below.

Bank creator contact information

Fish and Game Code Section 1851(a): "The name, address, and telephone number of the person or agency who created the wetland mitigation bank site."

Discussion: Bank creator is defined for the purposes of this Report as the person or entity that signed the bank agreement and has the primary responsibility for establishing the mitigation bank. The 2008 California multi-agency banking templates have substituted the terms bank sponsor and property owner for bank creator in order to encourage transparency in declaration of roles that the entities involved in bank establishment take on. While the bank creator is often also the bank property owner, when an inquiry is made about a bank, the requestor usually wants to know who owns or operates the bank. Reporting information about the bank owner is more meaningful and useful than reporting information about the bank creator. In cases where banks have had more than one owner the current bank owner is reported.

Information reported: In place of bank creator, bank owner name and contact information is reported for each bank. If the bank creator and the bank owner are not the same person or entity, the name of the bank creator is also provided.

Bank operator contact information

Fish and Game Code Section 1851(b): "The name, address, and telephone number of the wetland mitigation bank operator and the address or other appropriate physical description of the location of the wetland mitigation bank site."

Discussion: The 2008 California multi-agency banking templates have substituted the terms bank sponsor and land manager for bank operator in order to encourage transparency in disclosure of the roles that the entities take on. The term bank operator confuses the business role of banking (credit sales, contracts, etc.), with

on-the-ground land management operations. For the purpose of this Report the bank operator is the entity that has management responsibilities for the bank property. Some bank creators designate a separate entity or representative to manage their credit sales. If known, the contact information for credit sales manager is also reported.

Information reported: The name, address, and telephone number of the wetland mitigation bank operator are provided for each bank. If the bank operator has a website, the website address is also included. The address or other appropriate physical description of the location of the bank is provided under a separate heading, "General location of the bank."

Bank creation date

Fish and Game Code Section 1851(c): "The date the wetland mitigation bank site was created."

Discussion: The bank creation date is defined for the purposes of this Report as the date that the bank agreement was signed by all parties. In some cases this may differ from the Bank Establishment Date as it is defined under the 2008 multi-agency approved mitigation Bank Enabling Instrument (BEI) or bank agreement template. Formal bank establishment often requires a real estate protection measure, such as a conservation easement, be recorded and financial assurances secured. Bank agreements allowed variation in bank establishment criteria prior to 2008.

Information reported: The bank creation date is reported for each bank.

Bank's service area

Fish and Game Code Section 1851(d): "A description of the wetland mitigation bank site's service area."

Discussion: A bank's service area is defined for the purposes of this Report as the geographic area within which the bank credits can reasonably be expected to appropriately serve as mitigation for projects impacting wetlands. A bank's service area may be limited to a portion of a county or occupy portions of multiple counties.

Information reported: A description of the wetland mitigation bank site's service area is provided for each bank. A list of the counties which the service area overlaps is also included.

Pre-bank habitat functions on site

Fish and Game Code Section 1851(e):"A description of existing habitat functions at the wetland mitigation bank site prior to its development as a wetland mitigation bank site."

Discussion: Habitat functions are described and explained in detail in the "Description and Explanation of Habitat Functions" section of this Report.

Information reported: Existing wetland habitat functions at the wetland mitigation bank site prior to its development as a wetland mitigation bank site are listed for each bank.

Types of financial assurances

Fish and Game Code Section 1851(f): "The type of financial assurances secured by the wetland mitigation bank operator to ensure management of the wetland mitigation bank site in perpetuity."

Discussion: Financial assurances are mechanisms to ensure that the requirements for establishing a mitigation bank are fulfilled in the event that the bank operator is unable or unwilling to meet those obligations. Over the years, several types of financial instruments have been used as a guarantee that habitat establishment will be completed, and that funds will be provided for long-term management, maintenance, and monitoring costs. Types of financial assurances currently required include: 1) a construction security and or performance security [to establish wetland habitat on the bank site and/or maintain it until it fully meets performance criteria]; 2) an interim management security [to maintain the bank site until the bank closes credit transactions and transitions into long-term management]; and 3) an endowment fund [to provide funding for management, maintenance, and monitoring, when specified, of the bank site in perpetuity].

The security creates an economic incentive for bank operators to meet their obligations and to establish and manage the habitat in accordance with the bank's agreement. If a bank operator defaults on its obligation to establish and/or improve the habitat, the security provides funding for the regulatory agencies to complete the habitat work, and manage the property since it may have already been used to mitigate (via credit purchases) for permits. When obligations are met, the security is dissolved or returned to the mitigation bank owner.

Bank creators are required to provide these financial assurances to ensure that the habitat establishment is successful. Although not requested specifically in Section 1851, we have included general information on the financial assurances provided for initial and interim segments of bank/habitat construction and establishment in addition to securities that ensure perpetual management.

Information reported: The type of financial assurances used to ensure establishment and management of the wetland mitigation bank site in perpetuity are reported for each bank.

Bank goals

Fish and Game Code Section 1851(g): "Whether goals were established for the wetland mitigation bank site and what percentage of those goals has been achieved."

Discussion: Biological/ecological goals for bank sites are not always specifically described in bank documents. Often, the goals are inferred by the descriptions of the types of habitats planned and/or target species. Some of the bank documents and reports either do not specify biological/ecological goals for bank sites or only make reference to the goal of providing compensatory wetland mitigation.

Information reported: Goals reported for each bank are the biological/ecological goals as specified in bank documents or reports or as interpreted from descriptions of planned habitats or target species. For most banks, the percentage of goals achieved is reported as descriptive information interpreted from the bank's annual reports. A specific percentage is difficult to derive due to the wide variability in

progress toward meeting success criteria and in the way monitoring results are reported. Descriptive information about the progress of habitat establishment is more meaningful and useful than a simple percentage value.

Wetland acres and habitat functions established

Fish and Game Code Section 1851(h): "Utilizing existing information compiled by the United States Army Corps of Engineers or other federal agencies, the number of wetland acres and habitat functions created at the bank site."

Discussion: The information reported is the number of acres of wetland established and the habitat functions established rather than just the number of acres or habitat functions created. In practice, banks establish habitat by creation, restoration, or enhancement. For more information about wetland establishment and habitat functions see the "Description and Explanation of Habitat Functions" section of this Report.

Some of the banks in the report are "preservation banks," meaning that the bank was established to preserve wetland habitat and no new wetland habitat was created. For these banks, the number of acres of preserved wetland habitat is reported.

Information reported: The number of acres of wetland established is reported for each bank. The number of acres reported is based on either the target acreage to be established as specified in bank documents, or the acreage delineated after habitat establishment activities. Habitat functions established at each bank site are reported in bank documents, reports, or interpreted from descriptions of planned or established habitat.

Credits issued

Fish and Game Code Section 1851(i): "The number of credits issued and to whom."

Discussion: Credit allocation differs for each bank agreement, and often depends on the quality of habitat and type of restoration/creation activities that are proposed. Many banks use a 1:1 (one-to-one) acre:credit ratio, but for some banks, credit allocations have been calculated in a many-acres-to-one credit format or vice versa.

Information reported: The number of credits issued, and to whom, is reported for each bank as the number of credits sold and whether the credits were sold to a private party or a government agency.

Biological productivity of created wetlands

Fish and Game Code Section 1851(j): "An assessment of the biological productivity of the created wetlands."

Discussion: More information on biological productivity is available in the "Description and Explanation of Biological Productivity" section of this Report. USACE differentiates between types of "created" wetlands. This classification is based on the amount of degradation the habitat has undergone and the types of activities required to create a highly functional wetland. The information reported is for "established" wetlands, which includes wetlands established by "creation," "restoration," or "enhancement" activities.

Information reported: Assuming the reporting requirement is aimed at determining whether the wetland habitat is successfully established, information about the overall success of the wetland habitat or progress toward habitat success is reported as "Overall Wetland Habitat Success" for each bank. The information reported is based on the general success, or progress toward success of the established wetland habitat as described in and inferred from annual monitoring reports submitted to the agencies.

Wetland acres and habitat functions lost as result of permitted projects

Fish and Game Code Section 1851(k):"Utilizing existing information that is publicly available within the records of state or federal agencies, a comparison of the wetland acreage and habitat functions that were created at the bank site and those that were lost as a result of the permitted projects for which credits were obtained."

Discussion: Please see the "Description and Explanation of Habitat Functions" section of this Report for a more in-depth discussion.

Information reported: The inferred wetland functions, when possible, and actual acreage lost as a result of permitted projects is reported if the bank reported the information in their credit sales transaction reports.

Description and Explanation of Wetland Establishment

Some of the Section 1851 reporting requirements request information about habitat functions or biological productivity of "created" wetland habitat. Bank terminology and nationwide definitions under the USACE/USEPA mitigation rule distinguish between several types of wetland construction. In this Report, the term "established" wetlands will be used because not all the wetland habitat in mitigation banks is created. The term established is defined below and includes creation of habitat. The main goal for a wetland mitigation bank is to produce wetland habitat for which credits can be approved by the regulatory agencies and sold to proponents of projects needing mitigation.

Wetland habitat and species credits can be produced by establishing or preserving habitat. Protecting wetland habitat already in existence on the property before it is a bank site is considered preservation. It is simply preserved to protect and maintain its values; typically without improvements to the habitat.

Establishing habitat means undertaking specific activities to achieve self-sustaining habitat that has the physical and ecological characteristics (e.g., proper hydrology and plant and animal communities) associated with the specific type of wetland habitat targeted for establishment. The three currently practiced approaches to habitat establishment are creation, restoration, and enhancement. Creation refers to the process by which wetland habitat is created in a location that was not previously wetland habitat. Restoration refers to the re-establishment of wetland habitat which was previously destroyed or degraded and is restored to viable, functioning wetland. Enhancement refers to the process by which the ecological value of a pre-existing, but low functioning wetland is increased through specific actions such as increasing its size, developing special habitat areas in or around it, removing undesirable vegetation, connecting it to other nearby wetland habitat, etc. Each of the three approaches to wetland establishment employs various specific habitat establishment activities to varying degrees, with enhancement usually requiring the fewest activities and creation

requiring the most. The specific habitat establishment activities may include but are not limited to construction, planting, exotic/invasive species control, necessary structure installation (i.e., fencing, signage, corrals, trails), monitoring, maintenance, management, and remediation. These habitat establishment activities are carried out in accordance with: 1) bank objectives; 2) a written habitat development plan; 3) detailed design specifications; and 4) success criteria approved in conjunction with the bank agreement. Construction activities may include landscape excavation (i.e., vernal pool creation) and grading in a location that has the proper soil types to produce the slopes and water depths needed to establish the proper hydrology and vegetation. Once the construction and other necessary habitat establishment activities are completed, the site is monitored for several years to determine the success of wetland habitat establishment, and whether remediation measures will be necessary to bring the wetland into compliance with bank agreements, or state and federal standards.

Success criteria are a set of standards used to evaluate the development and successful establishment of created, restored, or enhanced wetland habitat and to evaluate whether the quality of preserved wetland habitat persists. The success criteria and the frequency of monitoring are negotiated by the IRT under guidance from Section 404 of the Clean Water Act and are stated in the bank agreement or supporting document. If established habitat does not develop as planned, or preserved habitat quality declines, remediation activities may need to be implemented. Once final success criteria are fully met, the habitat is considered successfully established.

Description and Explanation of Habitat Functions

Wetland functions are the normal or characteristic activities that take place in wetland ecosystems. Wetlands perform a variety of functions as a result of their physical, chemical, and biological characteristics.

The reporting requirements in Section 1851 do not define or provide guidance on how to report habitat functions. The habitat function terms used in the bank summaries (Appendix A) are derived from concepts in functional wetland assessment approaches

developed by the USACE⁸ and USEPA⁹ which describe a set of functions that can be measured for wetlands. These include:

1. Transportation and Storage of Water
 - a. Short-term surface water storage is the temporary storage of surface water for short periods. This process replenishes soil moisture, and helps maintain and improve surface water quality.
 - b. Long-term surface water storage is the persistence of surface water for a duration of time that allows for infiltration to groundwater.
 - c. Flood energy dissipation is the reduction of energy in moving water. This process reduces peak flood flows and amount of particulates carried and improves surface water quality.
 - d. High water table maintenance is a process that maintains groundwater storage, seasonal stream flows and water temperatures in streams.
2. Cycling and Transformation
 - a. Nutrient cycling is the conversion of elements from one form to another through abiotic and biotic processes. This process helps to maintain or improve surface water quality.
 - b. Retention of inorganic sediments reduces sediment and inorganic substances in surface water and improves water quality.
 - c. Retention/removal of imported elements improves water quality through the removal of nutrients, contaminants or other elements and compounds through burial, incorporation into biomass, or biochemical reactions.
3. Natural Community Establishment and Succession
 - a. Vegetation

⁸ Smith, R. D., Ammann, A., Bartoldus, C., and Brinson, M. M. 1995. An approach for assessing wetland functions using hydrogeomorphic classification, reference wetlands, and functional indices. Technical Report WRP-DE-9. U.S. Army Engineer Waterways Experiment Station, Vicksburg, MS. 88 p.

⁹ U.S. EPA, Wetlands Division. Wetlands Functions and Values. In: Watershed Ecology Modules. Watershed Academy Web, Internet Online Training in Watershed Management, available on the U.S. EPA website at <http://www.epa.gov/owow/watershed/wacademy/acad2000/wetlands/module02.html>.

The maintenance of native plant communities that are characteristic with respect to species composition, abundance, and age structure provides proper conditions for wetland plant survival, reproduction, and diversity.

b. Wildlife

The maintenance of animal communities that are characteristic with respect to species composition, abundance, and age structure helps to maintain ecological processes, including connectivity between habitat islands and landscape/regional biodiversity.

Description and Explanation of Biological Productivity

Biological productivity, depending on context, may refer to the gross primary production of plant species in a given area, the use of primary producers by secondary consumers, or the net sum of both processes. Section 1851 does not provide guidance, nor specify what criteria would meet the “biological productivity of created wetlands” reporting requirement.

Previous editions of this Report have proposed using the alternative “overall success of wetland habitats” which is based on each bank’s defined wetland creation performance success criteria, and the reported progress of each bank towards these set goals. This Report does not deviate from the previously used terminology, and maintains “overall success of wetland habitat” (or progress towards success) as an observable, quantifiable, and reasonable replacement for biological production.

III. DATA COLLECTION

Fish and Game Code Sections 1851 set the criteria for including a wetland mitigation bank in this Report:

- 1) the bank is existing/in operation (i.e., the bank has a fully approved bank agreement and is approved to sell credits), and
- 2) the bank sells credits to the public in California.

Banks that met both criteria but are no longer in operation because all credits have been sold continue to be included in the report as examples of successful banks.

They have progressed from establishment, through operation and credit sales, to closure, and long term management.

Data for all known existing wetland mitigation banks in California which meet the criteria are targeted for collection. This Report contains cumulative information and updated information for the period June 2009 to October 2011. The data were collected from CDFG approved bank agreements and bank documents such as bank management plans and annual reports. Bank agreements typically contain information about bank creators, bank operators, bank creation dates, bank service areas, and types of financial assurances. Bank management plans, in some cases, provide information on bank goals and pre-bank habitat functions. Annual reports, in many cases, provide information about the numbers of wetland acres and habitat functions created at the bank, and the number of credits issued.

CDFG was unable to obtain all required bank information from other regulatory agencies. Some information was not readily available. As a result some information is repeated from the previous report. The Department is continuing its effort to obtain data and information that were not available at the time this Report was produced.

Additionally, CDFG is not a participating agency to all wetland mitigation bank agreements in California, making it difficult to obtain any information about them. (CDFG currently lacks the staff and resources necessary to gather information about banks to which it is not a signatory agency; therefore, such banks are not included in this Report). For information on banks in California to which CDFG is not signatory, please visit the USACE's Regulatory In-lieu fee and Bank Information Tracking System (RIBITS) website at <http://geo.usace.army.mil/ribits/index.html>. Although the acronym remains the same, RIBITS has been renamed and given a more permanent Internet Protocol (IP) address since the last edition of this Report.

Obtaining data for the "wetland habitat functions" and "wetland functions lost to impacts" reporting requirements was particularly difficult. Section 1851 directs CDFG to report wetland mitigation bank information that is much more specific than what the State and federal banking policies require the bank operators report. The State and federal banking policies were published in 1995, five years before Section 1851 became effective. The banking policies are general in their specifications for reporting, and

neither policy specifies that wetland mitigation bank operators should report detailed wetland information such as descriptions of habitat functions prior to bank establishment (pre-bank habitat functions on site), habitat functions created at the bank (wetland acres and habitat functions established), wetland acreage and habitat functions lost (wetland acres and habitat functions lost as result of permitted projects), or assessment of wetland biological productivity (biological productivity of created_wetlands). As a result, the types and amount of information on these aspects of banks are generally not available for inclusion in this Report. While some banks may report some information about habitat functions at the bank site, there are no banks that report on biological productivity. As described in the previous section, a description of overall success of the wetland habitat is being reported in place of “biological productivity” due to difficulties with the biological productivity reporting requirement (see the section, “Description and Explanation of Biological Productivity”). As future banks are developed and approved, provisions can be made for getting assistance from the banks in compiling the needed information about habitat functions at bank sites.

Information for the reporting requirement, “wetland acres and habitat functions lost as result of permitted projects,” is not readily available. Specific information about project impacts is not routinely submitted to the regulatory agencies. Currently the resources to actively search, obtain, and report on the necessary documents and permit information are not available. The project impact information must be obtained from the permitting authority (agency) that approves the mitigation for the project. CDFG is continuing its efforts to obtain the needed information from other regulatory agencies as staffing allows.

Data Management and Information Distribution

Fish and Game Code Section 1850 requires CDFG to establish and maintain a database of all existing and operating wetland mitigation banks that sell credits to the public in California, and to use the California Environmental Resources Evaluation System (CERES) California Environmental Information Catalog (CEIC) to make the information available to the public. A computer database was developed using Microsoft Access software to meet the requirement of Section 1850. CDFG is currently compiling

the information required under Section 1850 along with some additional information necessary for tracking bank data, projects, and mitigation as staffing allows. The bank database is maintained by CDFG's Habitat Conservation Planning Branch. CDFG will provide information about the mitigation bank dataset to CERES for the CEIC.

In addition, CDFG is cooperating with the USACE in their endeavor to establish RIBITS, a nationwide database of Mitigation Banks. More information on the RIBITS database is available at <http://geo.usace.army.mil/ribits/index.html>. Bank information posted on RIBITS is available to the public. Updates on this project will be available in future reports and to the public via CDFG's website once the project is complete and a release date is set by USACE.

USACE and the USFWS have signed a Memorandum of Agreement that will facilitate the addition of all federally approved Conservation Banks to RIBITS. Since CDFG is co-signatory to many federally approved conservation banks this MOA will increase transparency of the conservation banking program within the State of California. CDFG has already contributed data to this process, and will continue to assist the USACE, USFWS, and RIBITS as staffing allows.

IV. CONCLUSION

Few generalizations can be made about wetland mitigation banks. For numerous reasons, there is great variability in all aspects of the banks in this Report, making it difficult to make any specific, direct comparisons. The banks in this Report are in various stages of implementation from the earliest operational stage (bank agreement approved and nearly ready to begin habitat establishment) to the last operational stage (credit sales completed and long-term management started). Nearly half of California's 52 counties have at least one established bank within their borders (Table 3). Table 4 provides a general summary and comparison of the banks, while Appendix A provides a more in-depth overview of each wetland mitigation bank. The information for each bank is organized in four general sections: Contact Information; Bank Information; Biological Information; and Operational Information. Appendix B, a list of conservation banks with and without wetland components, has been included to aid in comparison of CDFG's statewide Conservation and Mitigation Banking Program.

Table 3. Distribution of Mitigation and Conservation Banks by County

County	Number of Wetland Mitigation Banks	Number of Conservation Banks
Alameda		5
Colusa		1
Contra Costa		2
Kern		3
Lassen	1	
Marin	1	
Merced		1
Orange		1
Placer	1	1
Riverside	1	
Sacramento	4	2
San Bernardino		1
San Diego	3	7
San Luis Obispo		1
Shasta	2	
Solano	2	1
Sonoma	9	3
Sutter		1
Yolo	1	2
Total	25	32

To summarize the mitigation and conservation banks covered in this Report:

- 25 mitigation banks and 32 conservation banks have been approved by CDFG statewide.
- Banks have been established in 25 of California's 52 counties.
- 33 banks (mitigation and conservation combined) sell or have sold wetland credits;
- 8 of 32 conservation banks have wetland acreage and wetland credits
- 46 banks are privately owned/operated, and
- 11 banks are government owned/operated

- Overall size of the mitigation bank sites ranges from 12 acres to 1814.83 acres; and
- The range of wetland acreage established is 4.3 to 433.58 acres.

Additional information on CDFG's conservation and mitigation banking program is available at <http://www.dfg.ca.gov/habcon/conplan/mitbank/mitbank.html>. For questions about this Report please contact the Habitat Conservation Planning Branch at (916) 653-4875.

Table 4. Overview of Wetland Mitigation Banks in California

Name of Bank	County where bank is located	Counties within the bank's service area	Date the bank was created	Signatory agencies	Overall acreage of the bank	Wetland acreage established at the bank	# wetland credits	# wetland credits sold	# wetland credits remaining
Barry Jones Wetland Mitigation Bank	Riverside	western portion of Riverside	3/16/1998	USACE, USFWS, CDFG	136.0	33 preserved* acres	136.0**	32.76**	103.24** (as of Dec 2010)
Burdell Ranch Wetland Mitigation Bank	Marin	portions of Sonoma, Napa, Marin, Solano, and Contra Costa	9/12/2001	USACE, USEPA, USFWS, CDFG	82.7	24.1	241	227.0	14.0 (as of Sept 2011)
Carinalli Todd Road Mitigation Bank	Sonoma	portions of Sonoma	2/3/2009	USACE, USEPA, USFWS, CDFG	66.55	13.55 created (25.88 preserved*)	66.55**	Credits yet to be released for sale	66.55** (as of June 2011)
Clay Station Mitigation Bank	Sacramento	portions of Sacramento, Placer, El Dorado, Sutter, Amador, San Joaquin	7/28/1999	USACE, USEPA, USFWS, CDFG	405	86.95	83.240	52.47	30.77 (as of Dec. 2010)
Cosumnes Floodplain Mitigation Bank	Sacramento	Portions of Calaveras, Contra Costa, El Dorado, Sacramento, San Joaquin, Solano, Sutter, Yolo	10/6/2009	USACE, USEPA, NMFS, CDFG	493	433.58 restored (38.13 preserved*)	458.74 acres & 56541 linear feet	42.831 acres & 545 linear feet	415.909 acres & 55996 linear feet (as of May 2011)

*Preserved in this table refers to acreage that was not modified, or restored. All mitigation (and conservation) bank acreage is protected in perpetuity via conservation easement.

**Includes all possible credit types allocated to this bank.

Table 4. Overview of Wetland Mitigation Banks in California (continued)

Name of Bank	County where bank is located	Counties within the bank's service area	Date the bank was created	Signatory agencies	Overall acreage of the bank	Wetland acreage established at the bank	# wetland credits	# wetland credits sold	# wetland credits remaining
Cottonwood Creek Wetland Mitigation Bank	Shasta	portions of Shasta and Tehama	5/23/1994	USACE, CDFG	90	22.21	23.9	23.9	Sold Out (Sept 2001)
Desmond Mitigation Bank	Sonoma	a portion of Sonoma County	9/14/2005	USACE, USEPA, USFWS, CDFG	48.3	11.1	24.7	6.1	18.6 (as of Feb 2011)
Elsie Gridley Mitigation Bank	Solano	Solano, Napa, Yolo, Sacramento. Portions of Eastern Contra Costa, Northeastern Alameda, Placer, Glenn, Colusa, Sutter, El Dorado, Amador.	3/8/2006	USACE, USFWS, USEPA, CDFG	1814.83	27.59 (382.7 preserved*)	419.08	83.82	335.26 (as of Oct 2011)
Hale Mitigation Bank	Sonoma	a portion of Sonoma	7/1/2002	USACE, USFWS, USEPA, CDFG	75	23 (18 preserved*)	17.7	16.45	0.65 (as of Jul 2009)
Hazel Mitigation Bank	Sonoma	a portion of Sonoma	5/3/2006	USACE, USEPA, USFWS, CDFG	101	31.25	29.87	16.28	13.59 (as of Mar 2011)

*Preserved in this table refers to acreage that was not modified, or restored. All mitigation (and conservation) bank acreage is protected in perpetuity via conservation easement.

Bank Information:

Bank Creation Date:	3/16/1998	Total Credits Established:	136.0 (all credit types)
Total Bank Acreage:	136.0	Total Credits Sold:	32.76
		Total Credits Remaining For Sale:	103.24 (as of Dec 2010)

General location of the bank: Riverside County, approximately 35 miles south of the City of Riverside and approximately 39 miles north of the City of Escondido

Service Area Description: western boundary is the Riverside County line; northern boundary is the Riverside County line to San Timoteo Canyon Road; southern boundary is the Riverside County line to State Hwy 79; eastern boundary - no description available

Service Area Counties: western Riverside County

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Management Account (funded by the Bank Operator)
Financial Assurances for Maintenance Period: Management Account (funded by the Bank Operator)
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USFWS, CDFG

Biological Information:

Bank Site Goals

Maintain the overall diversity of the native flora and fauna within the Skunk Hollow Preserve.

Percentage of Goals Achieved

Overall the habitat remains preserved and functioning as intended.

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Fish and wildlife Habitat
Short-term water storage

Functions Created at the Bank Site

Plant habitat
Fish and wildlife Habitat
Short-term water storage

¹¹ This bank is also known as Skunk Hollow Preserve.

Barry Jones Wetland Mitigation Bank (continued)

Biological Information: (continued)

Total Wetland Acres Established: 33.0 (preservation only)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: N/A - preservation bank

Annual monitoring requirement: 30 years

Annual monitoring completed: Data not available*

Success criteria fully met: Since bank establishment, the overall habitat continues to be preserved as intended. Characteristic vegetation types and amounts remain intact, hydrological function is as expected, and desired animal species have been observed.

Current status of established wetland habitat: N/A - no habitat establishment (preservation bank).

Operational Information:

Impacts Mitigated by Bank:

Wetland Functions Lost:

Burdell Ranch Wetland Mitigation Bank¹²

Contact Information:

Bank Owner: Mount Burdell Enterprises James McKenney	Bank Operator: Mount Burdell Enterprises Tony Georges
Address: 365 Bel Marin Keys Blvd., Ste 100	Address: P.O. Box 2039
City, State, Zip: Novato, CA 94949	City, State, Zip: Mill Valley, CA 94942
Phone Number: (415) 884-2164	Phone Number: (415) 454-4151
	Website: http://www.burdell.net/Wetland.htm

Bank Information:

Bank Creation Date: 9/12/2001	Total Wetland Credits Established: 241.0
Total Bank Acreage: 82.7	Total Wetland Credits Sold: 227.0
	Total Wetland Credits Remaining For Sale: 14.0 (as of Sept 2011)

General location of the bank: Northern Marin County east of Highway 101 approximately 25 miles north of San Francisco and 7 miles south of Petaluma

Service Area Description: Marin County, exclusive of any areas west or south of State Route 1; Sonoma County within the Petaluma River and Walker Creek drainages and in the Sonoma Creek drainage from approximately the Town of Sonoma south; Napa County from the City of Napa west; Solano County from the City of Vallejo (Napa River drainage only) west; and Contra Cost County bordering San Pablo Bay lying between the Carquinez and Richmond-San Rafael bridges, with an inland boundary of Interstate 80 on the east and Cutting Boulevard and Interstate 580 on the south.

Service Area Counties: portions of Sonoma, Napa, Marin, Solano, and Contra Costa

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Performance Bond
Financial Assurances for Maintenance Period: Performance Bond
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Restore/enhance seasonal marsh, marsh riparian and native grassland/upland

Percentage of Goals Achieved

Hydrological performance has been met for 24.1 acres of constructed wetland habitat (Oct 2003).
Soils criteria have been met (Oct 2003).
Vegetation criteria were met for Year 2 (2004).

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Wildlife habitat
Short-term water storage
Maintenance of high-water table

Functions Created at the Bank Site

Plant habitat and diversity
Wildlife habitat
Short-term water storage
Maintenance of high-water table

Total Wetland Acres Established: 24.1

¹² This bank is also known as Burdell Ranch Wetland Conservation Bank

Burdell Ranch Wetland Mitigation Bank (continued)

Biological Information: (continued)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: December 2001 – October 2002

Annual monitoring requirement: Years 1-5 or until two consecutive years of success (all criteria)

Annual monitoring completed: 2 years

Success criteria fully met: Constructed wetland success criteria were fully met in 2009, however monitoring is still in progress. Hydrology was established for 24.1 acres of constructed wetland in 2003. Vegetation criteria were met for Year 2 (2004).

Current status of established wetland habitat: Succeeding, as of 2010. Hydrological conditions have been met, as of 2003. As of 2004, constructed wetlands had developed vegetative characteristics comparable to reference wetlands and fully met the success criteria.

Carinalli-Todd Road Mitigation Bank

Contact Information:

Bank Owner: Carinalli Nature Preserve, LLC. **Bank Operator:** Same as owner
Address: 520 Mendocino Avenue, Suite 250
City, State, Zip: Santa Rosa, CA 95401
Phone Number: (707) 578-1302

Bank Information:

Bank Creation Date: 2/3/2009	Total Bank Credits Established: 66.55
Total Bank Acreage: 66.55	Total Credits Released for Sale: 0 (as of June 2011)
	Total Credits Sold: 0 (as of June 2011)
	Total Credits Remaining For Sale: 0 (as of June 2011)

General location of the bank: 4301 Todd Road, southwest of the intersection of Todd and Llano Roads

Service Area Description: Santa Rosa Plain[±]

Service Area Counties: Sonoma

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: None
Financial Assurances for Maintenance Period: Contingency Security (type not specified).
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Preservation and enhancement of existing vernal pool and seasonal wetland habitats including habitat for special status species.

Percentage of Goals Achieved

1st year monitoring still in progress

Wetland Habitat Functions:

Functions Before Bank Creation

Plant Habitat
Short term water storage

Functions Created at the Bank Site

Plant Habitat
Wildlife Habitat
Short term water storage

Total Wetland Acres Established: 13.55 acres created, 25.88 pre-existing acres preserved.

[±] Santa Rosa Plain: Includes the valley lands west, northwest, and southwest of the City of Santa Rosa, extending north to the town of Windsor, west to the vicinity of the town of Trenton and City of Sebastopol, and south to the vicinity of the City of Sebastopol, and the City of Cotati. The eastern boundary follows US route 101 and Petaluma Hill Road south of Santa Rosa, then follows Highway 101 through Santa Rosa, veering east along the base of the Mayacames Mountains to the northern limit, north of the town of Windsor. The western boundary follows State Highway 116 from the vicinity of Cotati to the vicinity of Sebastopol, encompassing the bottom lands tributary to the Russian River, known as Lagunade Santa Rosa. From that point north, it follows approximately the 80 foot topographic contour line to the vicinity of Trenton, then follows Eastside Road to the northern limit.

Carinalli-Todd Road Mitigation Bank (continued)

Bank Information:

Bank Creation Date: 7/28/1999
Total Bank Acreage: 405
Phase I 168
Phase II/III 237

Total Bank Credits Established: 83.24
Phase I 37.29
Phase II/III 45.95
Total Credits Released for Sale: 52.50
Total Credits Sold: 52.47
Total Credits Remaining For Release : 30.77 (as of Dec 2010)

General location of the bank: southern Sacramento County, approximately 25 miles southeast of the City of Sacramento, on Clay Station Road, and adjacent to Laguna and Brown's Creeks

Service Area Description: Ecological Subsections¹³ 262Ag (Hardpan Terraces), M261 (Lower Foothills Metamorphic Belt), the portion of 262Ao (Camanche Terraces) north of the Mokelumne River, and with the additional limits of the Mokelumne River to the south, U.S. Interstate 5 to the west, the northern extent of the boundary of Placer County to the north, and the 1500 foot elevation to the east.

Service Area Counties: portions of Sacramento, Placer, El Dorado, Sutter, Amador, San Joaquin

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Phase I - None; Phase II, & III - Performance Bond
Financial Assurances for Maintenance Period: Phase I, II, & III - Performance Bond
Financial Assurances for Long-term management: Phase I, II, & III - Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Create/restore/enhance vernal pools and seasonal marsh, provide habitat connectivity

Percentage of Goals Achieved

Phase I - 100%
Phase II/III: as of 2004, 68.4% of the established vernal pools and 92% of the established seasonal wetlands and vernal pools have met the success criteria. After the 2010 monitoring season, seasonal marshes were re-categorized as either vernal pools or seasonal wetlands;

Wetland Habitat Functions:

Functions Before Bank Creation

Little or no habitat function

Functions Created at the Bank Site

Plant habitat
Fish and wildlife habitat
Short-term water storage

¹³ USDA Forest Service. 1997. Ecological Subregions of California. Section and subsection descriptions. R5-EM-TP-005. September 1997.

Clay Station Mitigation Bank (continued)

Biological Information: (continued)

Total Wetland Acres Established: 85.823
Phase I: 37.470 (created)
Phase II/III: 48.353 (created)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: Phase I - October 1994; Phase II/III - Aug 1999

Annual monitoring requirement: 5 years (all Phases)

Annual monitoring completed: Phase I - 5 years; additional monitoring conducted 1 year
Phase II/III - 4 years (2000, 2001, 2002, 2003, 2004)

Success criteria fully met: Phase I - 2000; Phase II/III - as of 2003, 68% of the established vernal pools and 92% of the established seasonal wetlands have met all the success criteria, and the rest of the habitat has met at least half (50%) of the success criteria.

Current status of established wetland habitat: All of the seasonal marshes, seasonal wetlands, and vernal pools are functioning as wetlands and support floristic compositions appropriate for their wetland type. Surveys indicate that tadpole shrimp (*Lepidurus packardii*), vernal pool fairy shrimp (*Branchinecta lynchi*), mid-valley shrimp (*Branchinecta mesovallensis*), and California linderiella (*Linderiella occidentalis*) continue to persist within the constructed vernal pools, seasonal wetlands, and seasonal marshes. Additionally, the various habitats within the Clay Station Mitigation Bank (including the constructed wetlands) continue to support a number of wildlife species, including mammals, amphibians, songbirds, ducks, shorebirds, and raptors.

(based on credits released by May, 2011)

General location of the bank: Sacramento County, near the City of Galt at the confluence of the Cosumnes and Mokelumne Rivers.

Service Area Description: The habitats which will develop on the bank are representative of the riparian vegetation communities occurring throughout the Sacramento-San Joaquin Delta and contributory river systems, and will provide an equivalent or enhanced wetland function compared to resources which could potentially be impacted in these areas. Therefore, the service area for the bank includes the entirety of the Cosumnes River watershed 8-digit Hydrologic Unit Code (HUC) -18040013.

Habitats on site will provide equivalent functionality to wetlands and other riparian habitats within watersheds throughout the eastern portion of the Sacramento-San Joaquin Delta. Therefore, the service area for the bank also includes all 10-digit HUC watersheds which have tidal influence.

Service Area Counties: Calaveras, Contra Costa, El Dorado, Sacramento, San Joaquin, Solano, Sutter, Yolo

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Letter of Credit

Cottonwood Creek Wetland Mitigation Bank

Contact Information:

Bank Owner: CA Department of Fish and Game **Bank Operator:** Same as Bank Owner
Northern California - North Coast Region
Address: 601 Locust Street
City, State, Zip: Redding, CA 96001
Phone Number: (530) 225-2300

Bank Information:

Bank Creation Date: 5/23/1994	Total Credits Established: 23.9
Total Bank Acreage: 90	Total Credits Sold: 23.9
Bank Closure Date: 9/28/2001	Total Credits Remaining For Sale: 0.0 (as of Sep 2001)

General location of the bank: Shasta County, approximately 3 miles east of the town of Cottonwood, adjacent to the Mouth of Cottonwood Creek Wildlife Area and near the confluence of Cottonwood Creek and the Sacramento River

Service Area Description: the Sacramento Valley floor within Shasta and Tehama Counties

Service Area Counties: portions of Shasta and Tehama

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: some of the funds generated from credit sales
Financial Assurances for Maintenance Period: some of the funds generated from credit sales
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, CDFG

Biological Information:

Bank Site Goals

Restore wetlands, upland wildlife habitat; preserve valley oak habitat; maintain riparian habitat

Percentage of Goals Achieved

>80%. All but two of the created wetland habitats were meeting success criteria as of 2006 monitoring.

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Fish and wildlife habitat
Short-term water storage

Functions Created at the Bank Site

Plant habitat
Fish and wildlife habitat
Short-term water storage
Long-term water storage

Total Wetland Acres Established: 22.21 (created/restored)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: 1996, 1999, 2000, 2001

Annual monitoring requirement: 5 years on each individual wetland built

Annual monitoring completed: 5 years of monitoring has been completed for the first wetlands built (1997-98, 1998-99, 1999-2000, 2000-01, 2001-02). Monitoring reports for subsequently built wetlands have been completed for 2002, 2003, 2004, 2005 and 2006. No monitoring was conducted in 2007-2010. Monitoring is scheduled for Fall 2011.

Success criteria fully met: Based upon a visual inspection in June 2011, all ten (10) wetlands are meeting hydraulic success criteria; assessment of vegetation success criteria will be conducted in Fall of 2011.

Cottonwood Creek Wetland Mitigation Bank (continued)

Biological Information: (continued)

Overall Wetland Habitat Success (continued)

Current status of established wetland habitat: Based upon the visual inspection conducted in June 2011, all ten (10) wetlands were functioning and had adequate water. There have been changes in the relative composition of species in the individual wetlands that are likely reflecting species composition, water management, development of soils, and other factors of wetland development that will be evaluated in more detail following the Fall 2011 survey. One invasive weed, *Cortaderia selloana* was observed in one wetland; control measures will need to be implemented. Based upon the June 2011 visual survey, the wetlands are doing well and supporting many bird species and other wildlife.

Desmond Mitigation Bank

Contact Information:

Bank Owner: Christopher and Annie Desmond **Bank Operator:** Same as Owner
Address: 4801 Llano Road
City, State, Zip: Sebastopol, CA 95472
Phone Number: (707) 824-9100

Bank Information:

Bank Creation Date: 9/14/2005	Total Credits Established: 24.7
Total Bank Acreage: 48.3	Preservation: 13.6
	Creation: 11.1
	Total Credits Sold: 6.1
	Total Credits Remaining For Sale: 18.6 (as of May 2011)

General location of the bank: Sonoma County, at 4801 Llano Road in an unincorporated area near the City of Sebastopol. The site is immediately southwest of the Laguna de Santa Rosa and immediately northwest of Llano Road.

Service Area Description: The central and southern portions of the Santa Rosa Plain[±].

Service Area Counties: a portion of Sonoma County[±]

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Performance Security (Letter of Credit)
Financial Assurances for Maintenance Period: Contingency Security (form not specified)
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Preserve existing seasonal wetland, perennial seep, and riparian habitat.
Create additional seasonal wetland Habitat

Percentage of Goals Achieved

Preservation accomplished.
Initial habitat creation is complete.
5 Year monitoring still in progress.

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Wildlife habitat
Short-term water storage
Maintenance of high-water table

Functions Created at the Bank Site

Plant habitat and diversity
Wildlife habitat
Short-term water storage
Maintenance of high-water table

Total Wetland Acres Established: 11.1
(Wetland acres preserved: 13.6)

[±] Santa Rosa Plain: Includes the valley lands west, northwest, and southwest of the City of Santa Rosa, extending north to the town of Windsor, west to the vicinity of the town of Trenton and City of Sebastopol, and south to the vicinity of the City of Sebastopol, and the City of Cotati. The eastern boundary follows US route 101 and Petaluma Hill Road south of Santa Rosa, then follows Highway 101 through Santa Rosa, veering east along the base of the Mayacames Mountains to the northern limit, north of the town of Windsor. The western boundary follows State Highway 116 from the vicinity of Cotati to the vicinity of Sebastopol, encompassing the bottom lands tributary to the Russian River, known as Lagunade Santa Rosa. From that point north, it follows approximately the 80 foot topographic contour line to the vicinity of Trenton, then follows Eastside Road to the northern limit.

Desmond Mitigation Bank (continued)

Biological Information: (continued)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: October 2004

Annual monitoring requirement: 5 years and at least until specified success criteria are met

Annual monitoring completed: Year 1 (2005), year 2 (2006), year 3 (2007), year 4 (2008), year 5 (2009), Year 6 (2010).

Success criteria fully met: Monitoring still in progress

Current status of established wetland habitat: In 2005, after one wet season, remedial grading of constructed vernal pools was required and completed. No further remedial grading is anticipated. Monitoring is still in progress. Based on six years of observations, the performance criteria have been met; however the final "Jurisdictional Wetland Determination" is pending. The Jurisdictional Wetland Determination will document acreage and vegetation cover characteristics throughout the constructed pools. All constructed wetlands support the minimum 80 percent absolute vegetative cover.

City, State, Zip: Greenbrae, CA 94904
Phone Number: (415) 472-1086

Bank Information:

Bank Creation Date: 5/3/2006	Total Wetland Credits Established: 29.87
Total Bank Acreage: 101	Total Wetland Credits Released: 21.14
	Phase 1: 4.47
	Phase 2: 10.42
	Phase 3: 5.96
	Total Wetland Credits Sold: 16.28
	Total Wetland Credits Remaining For Sale: 4.57
	(based on credits released as of Mar 2011)

General location of the bank: Sonoma County, at 4589 and 4645 Arlington Avenue, Santa Rosa, in the southwest part of the Santa Rosa Plain.

Service Area Description: the Santa Rosa Plain[±]

Service Area Counties: portions of Sonoma

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Performance Security (Letter of Credit)
Financial Assurances for Maintenance Period: Contingency Security (Letter of Credit)
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

An ecologically sound preserve with a self-sustaining ecosystem.

Percentage of Goals Achieved

Seasonal wetland creation on enhancement have been completed

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Wildlife habitat
Short-term water storage
Maintenance of high-water table

Functions Created at the Bank Site

Plant habitat and diversity
Wildlife habitat
Short-term water storage
Maintenance of high-water table

Total Wetland Acres Established: 31.25

[±] Santa Rosa Plain: Includes the valley lands west, northwest, and southwest of the City of Santa Rosa, extending north to the town of Windsor, west to the vicinity of the town of Trenton and City of Sebastopol, and south to the vicinity of the City of Sebastopol, and the City of Cotati. The eastern boundary follows US route 101 and Petaluma Hill Road south of Santa Rosa, then follows Highway 101 through Santa Rosa, veering east along the base of the Mayacames Mountains to the northern limit, north of the town of Windsor. The western boundary follows State Highway 116 from the vicinity of Cotati to the vicinity of Sebastopol, encompassing the bottom lands tributary to the Russian River, known as Lagunade Santa Rosa. From that point north, it follows approximately the 80 foot topographic contour line to the vicinity of Trenton, then follows Eastside Road to the northern limit.

Hazel Mitigation Bank (continued)

Biological Information: (continued)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: Aug 9, 2006

Annual monitoring requirement: 5 years (and more if any remediation is done)

Annual monitoring completed: 4 years

Success criteria fully met: N/A – monitoring still in progress.

Current status of established wetland habitat: Vernal pools, seasonal wetlands, and swales are exhibiting the required wetland hydrologic function. The percent cover of wetland species has increased substantially from 2009 to 2010 in response to the wetter than average 2009-2010 season.

Honey Lake Wetlands Mitigation Bank

Contact Information:

Bank Owner: CA Department of Fish and Game **Bank Operator:** Same as Owner
Northern California - North Coast Region
Address: 601 Locust Street
City, State, Zip: Redding, CA 96001
Phone Number: (530) 225-2300

Bank Information:

Bank Creation Date: 3/6/2001	Total Credits Established: 75.000
Total Bank Acreage: 300	Total Credits Released: 11.250
	Total Credits Withdrawn (Sold): 66.048
	Total Credits Remaining For Sale: -54.798 ¹⁴ (as of August 2011)

General location of the bank: Lassen County, southeast of the City of Susanville, adjacent to the west boundary of the Dakin Unit of the Honey Lake Wildlife Area

Service Area Description: the area encompassing the overlap of the Modoc Plateau Region of the Great Basin Floristic Province with the jurisdictional boundaries of the U.S. Army Corps of Engineers - Sacramento District and the Central Valley and Lahontan Regional Water Quality Control Boards

Service Area Counties: portions of Lassen, Modoc, and Plumas

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Operation/Maintenance Fund consisting of funds from Caltrans and commitments from DFG for operation, management, and monitoring.
Financial Assurances for Maintenance Period: Operation/Maintenance Fund consisting of funds from Caltrans and commitments from DFG for operation, management and monitoring.
Financial Assurances for Long-term management: Endowment and Maintenance Accounts

Signatory Agencies: USACE, USEPA, USFWS, CDFG, CA Department of Transportation (Caltrans)

Biological Information:

Bank Site Goals

Restore/enhance/create emergent wetlands, provide habitat for migrating waterfowl and other wetland associated flora and fauna

Percentage of Goals Achieved

Habitat establishment is in progress on 55 acres; 20 more acres will be initiated in 2012. Five years of monitoring have been conducted, however only half (50%) of the Year One success criteria had been achieved by 2009 and 2010. Remediation planting was conducted in 2010 and 2011.

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Fish and wildlife habitat
Short-term water storage
Maintenance of high-water table

Functions Created at the Bank Site

Wetland Plant habitat
Waterfowl habitat
Aquatic vertebrate and invertebrate habitat
Short-term water storage
Maintenance of high water table

Total Wetland Acres Established: 55 created in 2005; 20 more planned for 2010; 20-30 being considered after 2012

¹⁴ Please see the credit sales summary on the following page for more information regarding this negative credit balance.

Honey Lake Wetlands Mitigation Bank (continued)

Biological Information: (continued)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: Seeding was conducted in the fall 2005 on 55 acres with remediation seeding in fall 2009, remediation planting in September 2010 (1500 plants); remediation planting in June 2011 (4500 plants).

Annual monitoring requirement: 5 years, or until success criteria achieved.

Annual monitoring completed: 5 years of monitoring completed.

Success criteria met: Year 1 success criteria had been partially achieved by 2009 and 2010.

Current status of established wetland habitat: Habitat construction (55 acres) completed in 2004. Seeding was conducted in fall 2005; water management has been adjusted each year and wetland plants are showing increasing growth and establishment in the wetland area. Although cover values remain low and less than anticipated, wetland plants are showing increasing occupation of habitat throughout the wetland area. Remedial plantings were conducted in Sept. 2010, and June 2011.

Operational Information:

Impacts Mitigated by Bank:

Wetland Functions Lost:

Primarily will be roadside wetlands but not fully determined as USACE and Caltrans have not reached agreement.

Wetland Acres Lost:

Not yet determined as USACE and Caltrans have not reached agreement.

Credit Sales Summary:

*Credits not for sale to the public. For Caltrans use only. No ledger is available. Discussions between Caltrans and USACE regarding which areas will be mitigated at this site and number of remaining credits are ongoing. Resolution of this discussion has been hindered by the slow development of the wetlands on this site, and failure to achieve the anticipated success criteria in the time period.

Total Credits Sold: 66.048 have been withdrawn (sold), although only 11.25 credits have been released. The result is a negative balance of -54.798 credits. Remediation actions are pending which should result in release of additional credits.

Horn Mitigation Bank

Total Bank Acreage: 32.52

Total Credits Established: 16.0
Phase 1: 5.0
Phase 2: 6.5
Phase 3: 4.5
Total Credits Sold: 1.65
Total Credits Remaining For Sale: 14.35 (as of Apr 2009)

General location of the bank: Sonoma County, southeastern edge of the City of Santa Rosa, in central Sonoma County.

Service Area Description: Southern and central parts of the Santa Rosa Plain[±] (Cotati to Airport Blvd.) as portrayed by the Programmatic Consultation between the U.S. Fish and Wildlife Service and the U.S. Army Corps of Engineers.

Service Area Counties: a portion of Sonoma county

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Performance Security (Letter of Credit)
Financial Assurances for Maintenance Period: Contingency Security
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Establish a wetland mitigation bank that provides a significant amount of newly constructed or restored seasonal wetlands.

Percentage of Goals Achieved

Wetland construction complete.
Hydrology functions within comparable range of naturally occurring wetlands.
Created wetlands support regionally typical wetland and native species.

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Wildlife habitat
Short-term water storage
Maintenance of high-water table

Functions Created at the Bank Site

Plant habitat and diversity
Wildlife habitat
Short-term water storage
Maintenance of high-water table

[±] Santa Rosa Plain: Includes the valley lands west, northwest, and southwest of the City of Santa Rosa, extending north to the town of Windsor, west to the vicinity of the town of Trenton and City of Sebastopol, and south to the vicinity of the City of Sebastopol, and the City of Cotati. The eastern boundary follows US route 101 and Petaluma Hill Road south of Santa Rosa, then follows Highway 101 through Santa Rosa, veering east along the base of the Mayacames Mountains to the northern limit, north of the town of Windsor. The western boundary follows State Highway 116 from the vicinity of Cotati to the vicinity of Sebastopol, encompassing the bottom lands tributary to the Russian River, known as Lagunade Santa Rosa. From that point north, it follows approximately the 80 foot topographic contour line to the vicinity of Trenton, then follows Eastside Road to the northern limit.

Horn Mitigation Bank (continued)

Biological Information: (continued)

Total Wetland Acres Established: 16.0

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: October 2004.

Annual monitoring requirement: 5 years and at least until specified success criteria are met.

Annual monitoring completed: Year 3 (2007); Year 4 and 5 monitoring reports pending.

Success criteria fully met: Meets Year 3 criteria 10/1/2007.

Current status of established wetland habitat: Hydrologic functions are performing as expected. Vegetation levels have met targets for Year 3 and include the target amount of native species. Anecdotal evidence suggests the bank is also providing habitat for wildlife species. Monitoring continues and the final Jurisdictional Delineation is expected soon.

From that point north, it follows approximately the 80 foot topographic contour line to the vicinity of Trenton; then follows Eastside Road to the northern limit.

¹⁶ The term "other security interest" as used here, encompasses various assurance options, but is typically some form of a security interest in property such as a certificate of deposit or other cash equivalent, government or corporate bonds, a mortgage, etc. Some of these types of assurance options may have been accepted in the past, but are not currently accepted by the agencies.

Laguna (Carinalli) Mitigation Bank (continued)

Biological Information: (continued)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: October 2000; additional habitat work performed in 2006.

Annual monitoring requirement: 5 years; Remediation work completed in 2006, which initiated a new 5 year monitoring requirement.

Initial Annual monitoring completed: 5 years (2000-01, 2001-02, 2002-03, 2003-04, 2004-05)

Monitoring after remediation completed: 4 year (2009-2010)

Success criteria fully met: Remediation completed 2006 new monitoring cycle begun.

Current status of established wetland habitat: 2.4 acres have been successfully established (2004). An additional 3.1 acres of wetland habitat was constructed in 2006 to meet the required 5.5 acres required by the Bank Enabling Instrument.

General location of the bank: City of Carlsbad, San Diego County, south of Palomar Airport Road between Paseo del Norte and Hidden Valley Road

Service Area Description: Cities of Oceanside, Vista, San Marcos, Carlsbad, Encinitas, and western portion of northern San Diego County

Service Area Counties: Northwestern San Diego County

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: No financial assurances. All habitat enhancements and installations completed prior to any credit release.

Financial Assurances for Maintenance Period: Contingency Security held in Escrow

Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Removal of extensive exotic plant infestation (pampas grass) from Encinas Creek. Develop a wetland habitat greater in area and function than presently exists on site.

Percentage of Goals Achieved

Habitat restoration has met 5 year success criteria standards (as of 12/17/2005).

Wetland Habitat Functions:

Functions Before Bank Creation

Little wildlife habitat function due to pampas grass infestation.
Hydrology compromised due to past agricultural activities.

Functions Created at the Bank Site

Increased wildlife and habitat diversity.
Improved hydrology and water quality functions.

Total Wetland Acres Established: 11.30

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: 12/17/2007

Annual monitoring requirement: 5 years

Annual monitoring completed: monitoring in progress

Success criteria fully met: December 2007

Current status of established wetland habitat: monitoring in progress.

Bank Operator: Wildlands Inc.
3855 Atherton Road
Rocklin, CA 95765
(916) 435-3555

Website: www.wildlandsinc.com

Bank Information:

Bank Creation Date: 11/29/2000
Total Bank Acreage: 109

Total Credits Established:	54.920
Phase 1A	46.335
Phase 1B	8.585
Total Credits Sold:	38.931
Phase 1A	32.204
Phase 1B	6.727
Total Credits Retired¹⁹:	3.62
Total Credits Remaining For Sale:	12.990 (as of Sept 2011)
Phase 1A	10.5011
Phase 1B	1.858

General location of the bank: San Diego County, along Dulzura and Jamul Creeks on the Rancho Jamul Property bordering and south of Highway 94 and its junction with Otay Lakes Road

Service Area Description:

Primary Service Area: The area draining into San Diego Bay, including the Otay River, Sweetwater River, and Chollas Creek watersheds, for all in-kind mitigation of impacts to wetlands/waters of the U.S.
Secondary Service Area: The area draining into Mission Bay, including the San Diego River, Rose Creek, San Clemente Creek, and Tecolote Creek watersheds, for all in-kind mitigation in excess of 1:1 replacement for freshwater wetland, intermittent waters, and temporary impacts, or 2:1 replacement for jurisdictional riparian habitat.

Service Area Counties: a portion of San Diego County

Financial Assurance Type:

Financial Assurances for Wetlands Establishment ("Construction"): Performance Bond
Financial Assurances for Maintenance Period ("Habitat Establishment"): Contingency Security
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Restore/enhance floodplain, riparian habitat connectivity; increase species diversity; assist in Least Bell's vireo recovery.

Percentage of Goals Achieved

Phase 1A: Met Year 5 success criteria.
Phase 1B: Met Year 5 success criteria.

Wetland Habitat Functions:

Functions Before Bank Creation

Little to no wildlife habitat function
Diverted and incised channel

Functions Created at the Bank Site

Plant habitat and diversity
Wildlife habitat
Short-term water storage
Maintenance of high-water table

¹⁹ Refers to credits that were retired unsold.

Rancho Jamul Mitigation Bank (continued)

Biological Information: (continued)

Total Wetland Acres Established (enhanced/restored):

Phase 1A - 46.47 acres:

depressional wetland 4.70

riparian wetland 25.70

non-wetland waters/unvegetated streambed 0.85

enhancement of existing riparian wetland 8.02

oak riparian forest/sycamore woodland 7.20

Phase 1B – 10.1 acres:

depressional wetland 1.30

riparian wetland 8.80

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: Phase 1A - Feb. 2001
Phase 1B - Jan. 2003

Annual monitoring requirement: 1-5 years for each phase

Annual monitoring completed: 8 years for Phase 1A; 5 years for Phase 1B

Success criteria fully met:

Phase 1A: Monitoring results show Phase 1A meeting success criteria for Year 5.

Phase 1B: Monitoring results show Phase 1B meeting success criteria for Year 5.

Current status of established wetland habitat: The established wetland habitat continues to develop and function as intended. Habitat enhancement activities (exotic vegetation removal) continue to be successful. Much of the riparian habitat burned in the October 2007 wildfire, but the habitat is currently recovering.

Bank Information:

Bank Creation Date: 8/25/10
Total Bank Acreage: 113.39

Total Credits Established: 110
Total Credits Released For Sale: 3.18
Total Credits Sold: 0.97
Total Credits Remaining For Sale: 2.21

(based on credits released as of Nov. 2010)

General location of the bank: Yolo County, Northeast of Woodland.

Service Area Description: The eastern boundary begins at the Sierra Nevada foothills. The western boundary is consistent with the beginning of the coastal range. The northern boundary of the service area is consistent with the Yolo-Colusa County line then follows Subacco Road heading east until the intersection of Subacco Road with highway 113. The bank's boundary then follows highways 113 and 99 until highway 99 intersects with the Feather River. The northern boundary of the service area continues to follow the northern most boundary of the Pleasant Grove Creek-Cross Canal watershed. The southern boundary of the service area is the southern-most boundary of the Morrison Creek and Lower Putah Creek watershed, excluding the second legal delta.

Service Area Counties: Sutter, Yolo, Solano, Placer & Sacramento

Financial Assurance Type:

Financial Assurances for Wetlands Establishment:

Phase I: Not required, wetland construction concluded prior to bank creation.

Phase II: Construction Security in the form of a Letter of Credit

Financial Assurances for Maintenance Period:

Phase I: Performance Security in the form of a Letter of Credit.

Phase II: Performance Security in the form of a Letter of Credit.

Financial Assurances for Long-term management: Endowment shared by Phase I and II.

Signatory Agencies: USACE, USEPA, CDFG

Biological Information:

Bank Site Goals

Restore mosaic riparian scrub and freshwater marsh complex habitats to provide mitigation for regional impacts to waters of the US and waters of the state within a designated service area.

Percentage of Goals Achieved

Establishment in progress

Wetland Habitat Functions:

Functions Before Bank Creation

Little to no wetland function. The site was cultivated as row crops and walnut orchards prior to restoration.

Functions Created at the Bank Site

Establishment in progress.

Total Wetland Acres Established: 21.2 acres in Phase 1 (Freshwater Marsh 7.1 and Riparian 14.1) Phase 2 estimates 88.8 acres (70.7 FWM and 18.1 Riparian). Total will be 110 ac. (77.8 ac. FWM and 32.3 Riparian).

Sacramento River Ranch Mitigation Bank (continued)

Biological Information: (continued)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: Phase 1: 2008, Phase II: in progress

Annual monitoring requirement: Monitoring required annually. Reporting required Dec. 31.

Annual monitoring completed: 1st Year annual monitoring is in progress.

Success criteria met: Monitoring in progress.

Current status of established wetland habitat: Monitoring in progress.

Total Bank Acreage: 39.4	Total Credits Sold: 251.50
Bank Closed: 12/27/2002	Total Credits Remaining For Sale: 0 (as of Jul 2002)

General location of the bank: Sonoma County, at 1187 Todd Road, Santa Rosa; southwest of the City of Santa Rosa, approximately 2 miles from existing city limits

Service Area Description: Sonoma County

Service Area Counties: Sonoma

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Not specified in the Agreement
Financial Assurances for Maintenance Period: Not Specified in the Agreement
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Preserve vernal pools and endangered species populations

Percentage of Goals Achieved

Hydrology and vegetation performance criteria have been met for Year 4 (2003).

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Fish and wildlife habitat
Short-term water storage

Functions Created at the Bank Site

Plant habitat
Fish and wildlife habitat
Short-term water storage

Total Wetland Acres Established: 4.3 (restored)

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: 1999

Annual monitoring requirement: 5 years

Annual monitoring completed: 5 years

Success criteria fully met: Data not available¹

Current status of established wetland habitat: The bank was officially closed in December 2002. After credits were sold, Fee Title was transferred to the California Department of Fish and Game. CDFG continues to manage the bank.

Hydrology and vegetation criteria met for Year 4 (2003). Constructed vernal pool habitat is developing as expected and is performing/functioning comparable to the reference vernal pools.

	(as of Aug. 31, 2010)

General location of the bank: Shasta County, south of State Hwy 44 between Deschutes Road and Stillwater Creek, approximately 2 miles southeast of the City of Redding

Service Area Description: The bank has two service areas:

- The primary service area is bounded on the north by the southern edge of the Shasta-Trinity National Recreation Area (Shasta Reservoir), on the south by State Highway 36, on the east by Mineral Road and the western edge of Latour State Forest, and on the west by the eastern edge of the Shasta-Trinity National Recreation Area (Whiskeytown Reservoir), Mule Town Road, and Platina Road.
- For special-status plant species known to occur on the Bank Site (*Orcuttia tenuis*, *Legenere limosa*, *Gratiola heterosepala*, and *Juncus leiospermus* var. *leiospermus*), those portions of Shasta, Tehama, Butte, Yuba, and Sutter counties within the Northeast Sacramento Valley Vernal Pool Region as identified in the CDFG Vernal Pool Assessment (Keeler-Wolf, et al, 1998²⁰).

Service Area Counties: Primary service area: portions of Shasta and Tehama; Special-status plant species service area: portions of Shasta, Tehama, Butte, Yuba, Sutter

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Performance Bond
Financial Assurances for Maintenance Period: Performance Bond
Financial Assurances for Long-term management: Endowment

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Preserve existing vernal pools.
Establish additional vernal pool habitat.
Short-term water storage

Percentage of Goals Achieved

Constructed wetlands of Phases I, II, and III have met their success criteria to date.
Short-term water storage

²⁰ Keeler-Wolf, Todd, D.R. Elam, K. Lewis, and S.A. Flint. 1998. California Vernal Pool Assessment Preliminary Report. California Department of Fish and Game. May 1998.

Total Bank Acreage: 12	Total Credits Sold: 60.0
Bank Closure Date: 4/13/2000	Total Credits Remaining For Sale: 0.0 (as of Oct 1999)

General location of the bank: Sonoma County, in the Larkfield-Wikiup area just east of U.S. Highway 101 between the Town of Windsor and the City of Santa Rosa

Service Area Description: the Santa Rosa Plain[±]

Service Area Counties: portions of Sonoma, Napa, and Marin

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Cash
Financial Assurances for Maintenance Period: Trust Account
Financial Assurances for Long-term management: Endowment Fund

Signatory Agencies: USACE, USEPA, USFWS, CDFG

Biological Information:

Bank Site Goals

Provide a habitat that resembles the natural Santa Rosa Plain and provides habitat for native amphibians, water associated birds and aquatic invertebrates.

Percentage of Goals Achieved

100%. Success criteria met in fourth year after habitat establishment work was completed.

Wetland Habitat Functions:

Functions Before Bank Creation

Plant habitat
Fish and wildlife habitat

Functions Created at the Bank Site

Plant habitat
Fish and wildlife habitat
Short-term water storage
Nutrient cycling

Total Wetland Acres Established: 6.0 (created)

[±] Santa Rosa Plain: Includes the valley lands west, northwest, and southwest of the City of Santa Rosa, extending north to the town of Windsor, west to the vicinity of the town of Trenton and City of Sebastopol, and south to the vicinity of the City of Sebastopol, and the City of Cotati. The eastern boundary follows US route 101 and Petaluma Hill Road south of Santa Rosa, then follows Highway 101 through Santa Rosa, veering east along the base of the Mayacames Mountains to the northern limit, north of the town of Windsor. The western boundary follows State Highway 116 from the vicinity of Cotati to the vicinity of Sebastopol, encompassing the bottom lands tributary to the Russian River, known as Lagunade Santa Rosa. From that point north, it follows approximately the 80 foot topographic contour line to the vicinity of Trenton, then follows Eastside Road to the northern limit.

Wildlands Mitigation Bank²¹

Contact Information:

Bank Owner: Sheridan Mitigation Corp.
Address: 3888 Cincinnati Ave
City, State, Zip: Rocklin, CA 95765
Phone Number: (916) 408-2290 x 15
Website: <http://www.restoration-resources.net>

Bank Operator: Same as bank owner

Bank Information:

Bank Creation Date: 10/14/1994
Total Bank Acreage: 615
Phase I 78
Phase II 119
Phase III 118
Phase IV 300

Total Wetland Credits Established: 308.06
Total Wetland Credits Sold: 290.8284²²
Total Wetland Credits Remaining For Sale: 0
(as of Jan 2008)

General location of the bank: Placer County, west of State Route 65, approximately one mile northwest of the town of Sheridan

Service Area Description: basically a 40-mile radius around the bank site, with a few areas extending beyond the 40-mile radius: northward to five miles north of Chico, west to three miles west of Interstate 5, and east to approximately 1000-foot elevation and excluding Butte County meadowfoam vernal pool complexes; southward to south of State Route 12, west to Interstate 5, and east to the Amador County line; westward, three miles on each side of Interstate 80 to its junction with Interstate 680.

Service Area Counties: Sutter and portions of Glenn, Colusa, Butte, Yuba, Nevada, Placer, El Dorado, San Joaquin, Solano, Yolo, Sacramento

Financial Assurance Type:

Financial Assurances for Wetlands Establishment: Phase I-III - Performance Bond & Letter of Credit;
Phase IV - Letter of Credit
Financial Assurances for Maintenance Period: Phase I-III - Not Specified in the Agreement,
Phase IV - Letter of Credit
Financial Assurances for Long-term management: Phase I-IV - Endowment

Signatory Agencies: USACE, USFWS, CDFG

Biological Information:

Bank Site Goals

Establish wetland and riparian habitat types in the area and restore native vegetation to the upland buffer areas.

Percentage of Goals Achieved

100% for Phase I - III
Phase IV, Year 3 monitoring:
Vernal pools have met vegetation performance standards. Seasonal and perennial marsh habitats have met or exceeded performance standards.
Riparian habitat is meeting performance standards overall.

²¹ The Bank Owners have also referred to this bank as Sheridan Mitigation Bank and currently refer to it as Silvergate Mitigation Bank.

²² Bank sold out as of 1/29/2008; original 1994 bank agreement did not specify number of credits available for sale. Research into final number of credits allocated is pending.

Wildlands Mitigation Bank (continued)

Biological Information: (continued)

Wetland Habitat Functions:

Functions Before Bank Creation

Little or no habitat function

Functions Created at the Bank Site

Plant habitat
Fish and wildlife habitat
Short-term water storage

Total Wetland Acres Established: 312.97

Phase I 59.70

Phase II 84.81

Phase III 51.32

Phase IV 117.14

Overall Wetland Habitat Success

Progress toward meeting success criteria:

Habitat establishment work completed: Phase I - July 1995
Phase II - 1998
Phase III - 1998
Phase IV - 2002

Annual monitoring requirement: 5 years (all Phases)

Annual monitoring completed: Phase I - 5 years
Phase II - 5 years
Phase III - 5 years
Phase IV - 3 years

Success criteria fully met: Phase I - 2001
Phase II - 2002
Phase III - 2003 (all but 3.684 acres)
Phase IV - N/A, monitoring still in progress

Current status of established wetland habitat:

Phases I, II - The established wetland habitat continues to persist and function as intended.

Phase III - Success criteria fully met in 2003 on all but 3.684 acres. Remediation work is being conducted as part of the Phase IV habitat establishment work.

Phase IV - Target vegetation types and amounts are established or are becoming established, and overall the habitat is developing as intended.
